

17th October 2023

Dear Sirs,

On behalf of the Polytechnic School of Engineering of Gijón, I am writing to inform you about our interest on the celebration of the “All Electric Society” International Summit in our city, as well as to express our commitment of promotion in our university community and in our partner companies.

In our school we teach 9 Bachelor degrees and 8 Master degrees related to the main fields of the industrial, telecommunication, computer and data science engineering. In all of them, the e-mobility sector and their applications have a strong presence, as this is a key knowledge area for us. Additionally, 4 engineering departments and around 40 research groups are located in our Campus and develop their activity in fields directly related with the scope of the summit, such as electric motors, power electronics, automation and control, renewable and emerging energy technologies, energy production and management, artificial intelligence, machine learning, quantum computing or virtual reality, among others.

Phoenix Contact and the University of Oviedo have a long collaboration of 13 years in different activities related with automation technology, started by Dr. Adriano Mones and some teachers of our school as Dr. Felipe Mateos and Dr. Hilario López. Since 2018 both parts have strength this partnership enlarging this cooperation to the E-Mobility knowledge area, involving the “Smart Cities” chair.

This extensive experience and constant commitment to the dissemination of technological advances in their fields of specialisation are reasons why they have our full confidence and support to organise the congress in the city.

Finally, I would like to highlight that the School is located in a particularly attractive area of Gijón, both from economic and cultural points of view, with unique facilities of interest for the congress participants.

I would like to take this opportunity to send you my warmest greetings in the hope that this candidature will be a success.

Yours faithfully,

Inés Suárez Ramón

Dean of the Polytechnic School of Engineering of Gijón
